Dear Pat:

I have received your letter of September 17 and will comply with your request as soon as I get a few urgent matters taken care of such as setting up the next Board meeting for the Health Physics Society. The HP data were looked at individually when they were collected and at the time LA-1151 was written. At that time they looked so bad we decided to group them for the report. The individual data obviously would be expected to look bad since these were all sick individuals. You might contact Evan Campbell here at Los Alamos, since I know he is engaged in looking at some of the individual data and periodically seems to do so for one reason or another.

I was aware that there was other information at Crocker, particularly that involving americium-241, but was never able to get my hands on any of the data. Keep digging in the closet, because who knows what you will find. I will write you again later when I have had time to look for part of the information you requested.

Sincerely yours,

Wright R. Langham
Group Leader
Biomedical Research
